EMP Shield Battery Protection

If you are using our 12V, 24V, or 48V DC model to protect a battery or battery system.

DC EMP Shield Wires

Red (Positive)

Black (Negative)

Green (Ground)

Ground

Always select your EMP Shield based on the voltage of your battery or battery system. Only 1 EMP Shield is needed to protect a battery system (even if you have many batteries).

Note: Batteries can be connected in multiple ways to create different voltages. Be sure to check what the voltage of your battery system is before purchasing and connecting the EMP Shield.

For question about EMP Shield call: 620-412-9978 or email us: Info@EMPShield.com
